

Emcee Keynote Introduction

Maureen Zappala

The Propulsion Principle
Keynote introduction for emcee

Note: Please read this just as written, unless first discussed with Maureen

Everyone in this room has a track record of accomplishments. And yet there are moments when that evidence goes quiet, and you hold back on the idea or opportunity you are more than ready for. Some people call that **impostor syndrome,** and they're right. Our next speaker calls it a **performance problem,** and she's about to hand you the controls to change what happens in those moments.

Maureen Zappala **(zuh-PAH-luh)** is a former NASA propulsion research engineer. Yes, she's a rocket scientist. She was the youngest and first female manager of NASA's Propulsion Systems Laboratory, where she spent almost 14 years conducting jet engine research. She's also a mom to two adult children. In fact, she says, "Raising kids is WAY harder than jet engine research. **WAY HARDER!"**

After today, you'll have an execution protocol for the moment when doubt says "don't," so you'll be ready to perform at the level your track record says you can.

Please welcome, from sunny Las Vegas, Nevada,
author, speaker and enthusiastically average ballroom dancer,
Maureen Zappala. (zuh-PAH-luh)
